5. DESIGN

// DESIGN

A project is successful when:

- it is made for the customer
- it has curated contents, with nothing left to chance
- becomes a reference for visitors

The main steps that precede the definition of a concrete project are:

- on-site inspection to figure out all the activities to be carried out and annexed survey
- cad-design structuring of the environments to be allocated to various uses
- comparison with the various figures
- the works under construction
- satisfaction of the client by means of photorealistic renderings

// RENDERING

Touch is the sense that facilitates choices, but when dealing with projects without specific forms for each realization, sight is king.

At the end of the work we like to compare the preview of the project / rendering with real photos, most of the time the result obtained is better than that defined with the client in the design phase.

3. CHAIN MANAGEMENT

// OUR WORK FOR CHAINS

Franchising in the catering sector is confirmed as one of the liveliest sectors also in terms of creativity, especially in a country rich in food and wine traditions like ours, which is continually subjected to re-elaborations, rediscoveries and variations on the theme. Alternative idea, making a brand recognizable, an attractive graphic project and re-proposing the same products from the various points of the world, this is knowing how to manage Contracts and this is what we try to do every day.

3. SINGLE REALIZATIONS

// OUR WORK FOR SMALL REALITIES

The ability that best represents us is that of being a multifaceted company. We can redevelop a place that in order to keep up with the times and trends of the moment decides to rely on our knowledge and therefore prefer hi-tech style equipment and environments, just as we manage to create "traditional" premises while always providing excellent quality equipment that goes well with the needs and interests of the more conservative clientele.

3. COMMON PROJECT AND OBJECTIVES

// PROJECT MANAGEMENT

Managing a project means:

- understand the client's needs.
- relate to the architecture studio.
- choose suitable suppliers.
- meet economic requirements.
- follow the construction site, logistics and after-sales service

Every single detail must be adequately defined to finalize the project in a contract where actors with different purposes and interests are involved with the common goal of satisfying the customer.
